How to Use the Calculator. Type your algebra problem into the text box. For example, enter $3x+2=14$ into the text box to get a step-by-step explanation of how to solve $3x+2=14$. Try this example now! »

Algebra Calculator - MathPapa

To calculate that constant, divide the coefficient of the x-term (which is -12) by 2 (giving -6) and square the result ((-6)² = 36). Adding 36 to both sides of the original equation will complete the square: notice that $x^2 - 12x + 36$ is indeed a perfect square trinomial because it can be factored as $(x - 6)^2$. 7. C.

Algebra 2 Practice Questions - Study Guide Zone

In Algebra 2, students learn about the analog between polynomials and the integers, through adding, subtracting, and multiplying polynomials. This also paves the way for factoring and dividing polynomials.
