Synthetic Adulteration. The other risk when an herb becomes popular is adulteration, and unfortunately, this is happening with curcumin in the form of synthetic versions being sold as natural. In early 2015, Sabinsa Corp. discovered synthetic versions of curcumin had made their way into the supply chain.

### **The State of the Curcumin Market | Natural Products INSIDER**

Curcumin has similar color characteristics than the synthetic food colorant tartrazine (FD&C yellow No. 5); however, unlike tartrazine, it is highly sensitive to light and alkaline pH, and is also degraded by heat and chemical oxidants. It is therefore not easy to use in food processes and products destined to long-term storage.
