Cardiac Arrest : Five Heart-Stopping Years As a Ceo on the ...

Cardiac arrest is the sudden loss of cardiac function, when the heart abruptly stops beating. Unless resuscitative efforts are begun immediately, cardiac arrest leads to death within a few minutes. This is often referred to by doctors as "sudden death" or "sudden cardiac death (SCD)."

Sudden Cardiac Arrest Causes, Symptoms & Survival Rate

Sudden cardiac arrest (SCA) is a condition in which the heart suddenly and unexpectedly stops beating. If this happens, blood stops flowing to the brain and other vital organs. SCA usually causes death if it's not treated within minutes. Overview. To understand SCA, it helps to understand how the heart works. The heart has an electrical system that controls the rate and rhythm of the heartbeat.

Sudden Cardiac Arrest | NHLBI, NIH

During cardiac arrest, unconsciousness will occur rapidly once the heart stops beating, typically within 20 seconds. Deprived of the oxygen and sugars it needs to function, the brain will be unable to deliver the electrical signals needed to sustain organ function, including breathing. This can lead to a hypoxic-anoxic injury (HAI).

Brain Activity and Damage After Cardiac Arrest

Overview. Sudden cardiac arrest is the abrupt loss of heart function, breathing and consciousness. The condition usually results from an electrical disturbance in your heart that disrupts its pumping action, stopping blood flow to your body. Sudden cardiac arrest differs from a heart attack, when blood flow to a part of the heart is blocked.

Sudden cardiac arrest - Symptoms and causes - Mayo Clinic

Cardiac arrest is a sudden loss of blood flow resulting from the failure of the heart to pump effectively. Signs include loss of consciousness and abnormal or absent breathing. Some individuals may experience chest pain, shortness of breath, or nausea before cardiac arrest. If not treated within minutes, it typically leads to death.. The most common cause of cardiac arrest is coronary artery ...
