These are the hallmarks of the Union Pacific Railroad's unique GTEL 8500 Horsepower Turbine locomotives. Often called "Big Blows" because of their deafening noise, they roamed the less populated landscape between Council Bluffs, IA and Ogden, UT. 30 three unit sets were built between 1958 and 1961 and all were retired by the early 1970s.

A wind turbine is a device that converts the kinetic energy of wind into electrical energy. Hundreds of thousands of large turbines, in installations known as wind farms, now generate over 650 gigawatts of power, with 60 GW added each year. They are an increasingly important source of intermittent renewable energy, and are used in many countries to lower energy costs and reduce reliance on ...

The General Electric TF39 was a high-bypass turbofan engine that was developed to power the Lockheed C-5 Galaxy. The TF39 was the first high-power, high-bypass jet engine developed. The TF39 was further developed into the CF6 series of engines, and formed the basis of the LM2500 marine and industrial gas turbine. On September 7, 2017, the last active C-5A powered with TF39 engines made its ...
